Claims 1-24 meet the criteria set out in PCT Article 33(2)-(3), because the prior art does not teach or fairly suggest: in a system for processing a signal containing video data, an apparatus for providing trellis decoded data, the apparatus comprising means for adaptively filtering signal distortions, means for identifying re-encoded trellis decoded data as received from the means for adaptively filtering, a feedback filter responsive to the re-encoded trellis decoded data, and a trellis decoder responsive to an output signal generated by the feedback filter.

Claims 1-24 the criteria set out in PCT Article 33(4), and thus have industrial applicability because the subject matter claimed can be made or used in industry.
